

ARTMOBILE PARKING MAP

Please map out the school building, entrance roads and parking areas. Indicate the correct placement and orientation of the Artmobile. Be sure to note on your drawing where the steps should be placed. An area of at least 60' x 20' and within 100' of a suitable electric line is required for the Artmobile. In addition, the driver must have ample space in which to maneuver his vehicle.

When determining where the Artmobile should be placed on your site, please keep in mind the following guidelines: The trailer is 50 feet long. An additional 10 feet is required at the rear of the trailer for the operation of the lift. A minimum of 4 feet is needed along the right side of the trailer for the steps. The steps must be installed on level ground. It is not possible to park the trailer along a curb and to install the steps on the sidewalk. Please plan for the safety of your students when determining the position in which the Artmobile should be placed.
